

Harnessing Technology. Revolutionizing Global Food and Agriculture.

Securing the future of food with the world's first intelligent agricultural cloud.

Who We Are

Qualimark Mission:

Empowering countries, enterprises, and farmers to optimize every hectare and drive food resilience in a climate-impacted world.

1 billion
hectares monitored

16.5 million
hectares digitized

global investors

Our Technology Solutions

The Qualimark Cloud platform delivers comprehensive agricultural technology solutions that transform data into actionable insights, enabling precise monitoring and management of crops and livestock.

Qualimark Cloud Platform

Our centralized cloud-based platform integrates all agricultural data, providing a complete view of operations with advanced analytics and intuitive visualization tools.

Precision Mapping

High-resolution satellite imagery and drone mapping solutions provide accurate field boundaries, crop health assessment, and yield predictions across vast agricultural areas.

Mobile Applications

Field-ready mobile applications allow farmers to capture data, receive alerts, and make decisions in real-time, even in remote areas with limited connectivity.

AI & Machine Learning

Advanced algorithms analyze historical and real-time data to provide predictive insights, early detection of issues, and automated decision support for optimal farm management.

IoT Integration

Seamless connectivity with field sensors, weather stations, and livestock monitoring devices enables comprehensive data collection and automated alerts for critical events.

Advanced Analytics

Transform complex agricultural data into actionable intelligence with customizable dashboards, performance metrics, and detailed reporting capabilities.

Client Success & Achievements

Productivity Increase

Regional producer increased wheat yield by +20% using our monitoring platform.

Optimized water and fertilizer resources with 30% reduction in operational costs.

Strategic Partnerships

Collaboration with government agencies for food security policies in 5 countries.

Support for agricultural startups with technology and data on our open innovation platform.

25+ Government Agencies

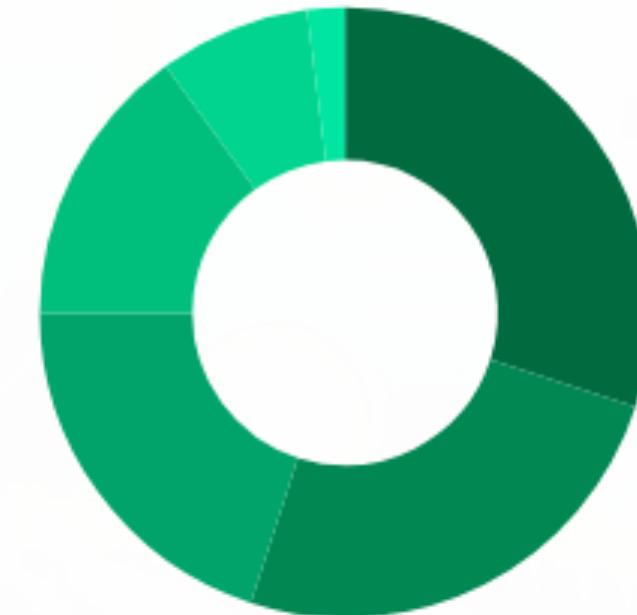

40+ Startups

Global Reach

Our technology is used in 103 countries, spanning all continents and diverse climate zones.

Regional Client Distribution

- South America
- North America
- Europe
- Asia
- Africa
- Oceania

Comprehensive Coverage

10,000+

Qualimark Team & Investments

Our strength comes from our diverse team of experts and strategic investment partnerships.

Leadership Excellence

Diverse leadership team with deep expertise spanning agricultural technology, data science, and sustainable farming practices across multiple continents.

Global Advisory Network

Access to world-class advisors in agriculture, technology, and sustainability from leading universities and research institutions across 25+ countries.

Strategic Investment Partners

Backed by premier venture capital funds specializing in agritech and sustainability, supporting our long-term vision for agricultural transformation.

Innovation Focus

Committed to continuous innovation with 20% of resources dedicated to R&D in emerging technologies for sustainable agriculture and food security.

Future Vision & Goals

Building the future of agriculture through technology, data intelligence, and sustainable practices.

Global Leadership

Aim to be the world-leading smart agriculture data platform, transforming how farms operate across continents.

Expanding Coverage

Goal: Cover 2 billion hectares by 2030, bringing digital agriculture solutions to every corner of the farming world.

AI Innovation

Advance artificial intelligence solutions for sustainable farming, optimizing resource usage and reducing environmental impact.

Global Partnerships

Achieve food security through international collaborations with governments, NGOs, and agricultural organizations worldwide.

Agricultural Inspection & Audit Systems

Qualimark's cutting-edge inspection and audit technologies transform agricultural quality assurance with digital precision, ensuring compliance and traceability at every step of production.

Drone Inspection

Advanced aerial technology for rapid, precision field assessment and documentation with high-resolution imaging

Digital Field Audits

Standardized protocols with real-time data capture and analysis for comprehensive assessment

Quality Certification

Automated verification against global agricultural standards with digital compliance tracking

Smart Sampling

AI-driven sampling methodology with portable testing kits for soil, water, and crop analysis

Traceability Systems

End-to-end tracking from farm to consumer with blockchain-secured verification

Compliance Analytics

Customizable reporting with trend analysis and risk assessment for continuous improvement

Livestock Monitoring & Tracking

Smart Collar Technology

Our electronic collars and ear tags provide 24/7 monitoring of livestock health and location data.

- Real-time temperature monitoring
- Movement pattern analysis
- Rumination tracking
- Geolocation and geofencing
- Battery life up to 3 years

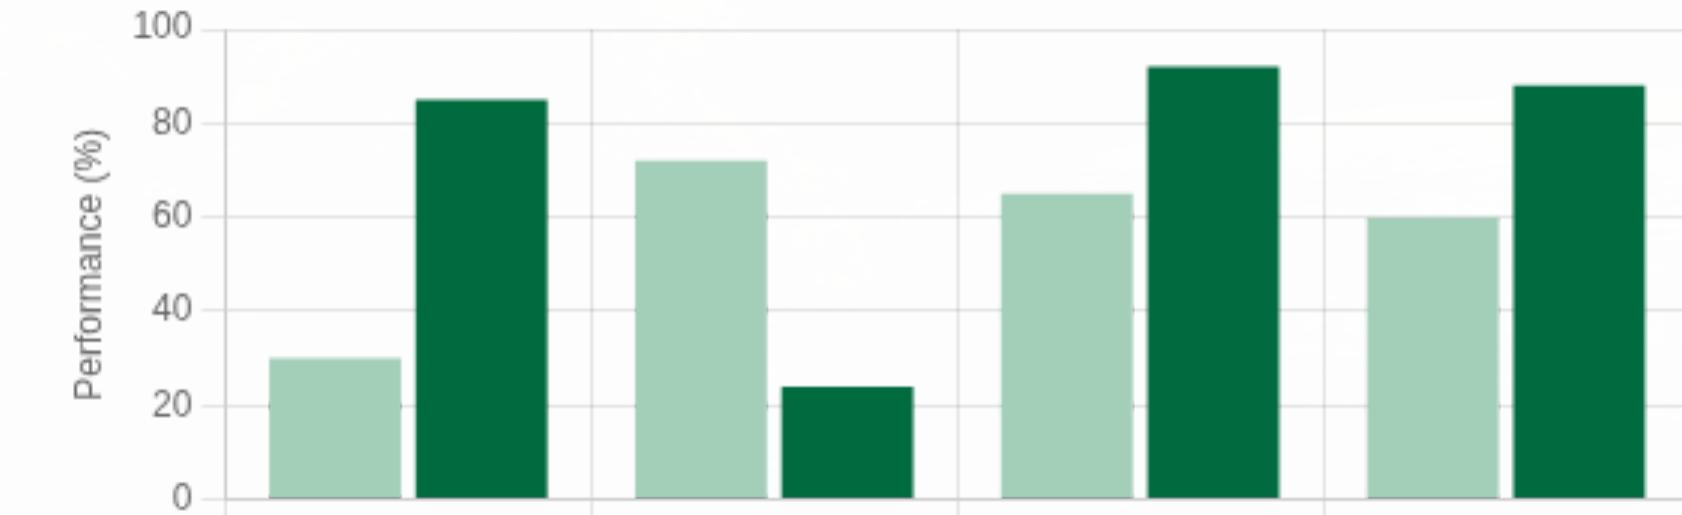

Only 120g

5km range

Data sync every 4h

Performance Impact

Early detection of health issues leads to 32% reduction in treatment costs and 28% improvement in reproductive success rates.

Monitoring Dashboard

Our mobile and web applications provide real-time insights and alerts on:

Health Monitoring

Body temperature, heart rate, and activity patterns

Location Tracking

Real-time positioning and movement history

Alert System

Automated alerts for abnormal behaviors

Feeding Analytics

Feeding patterns and nutrition optimization

Client Results

Southern Cattle Company

"Using Qualimark's livestock monitoring system, we've reduced mortality rates by 24% and improved overall herd health significantly."

24%

Lower Mortality

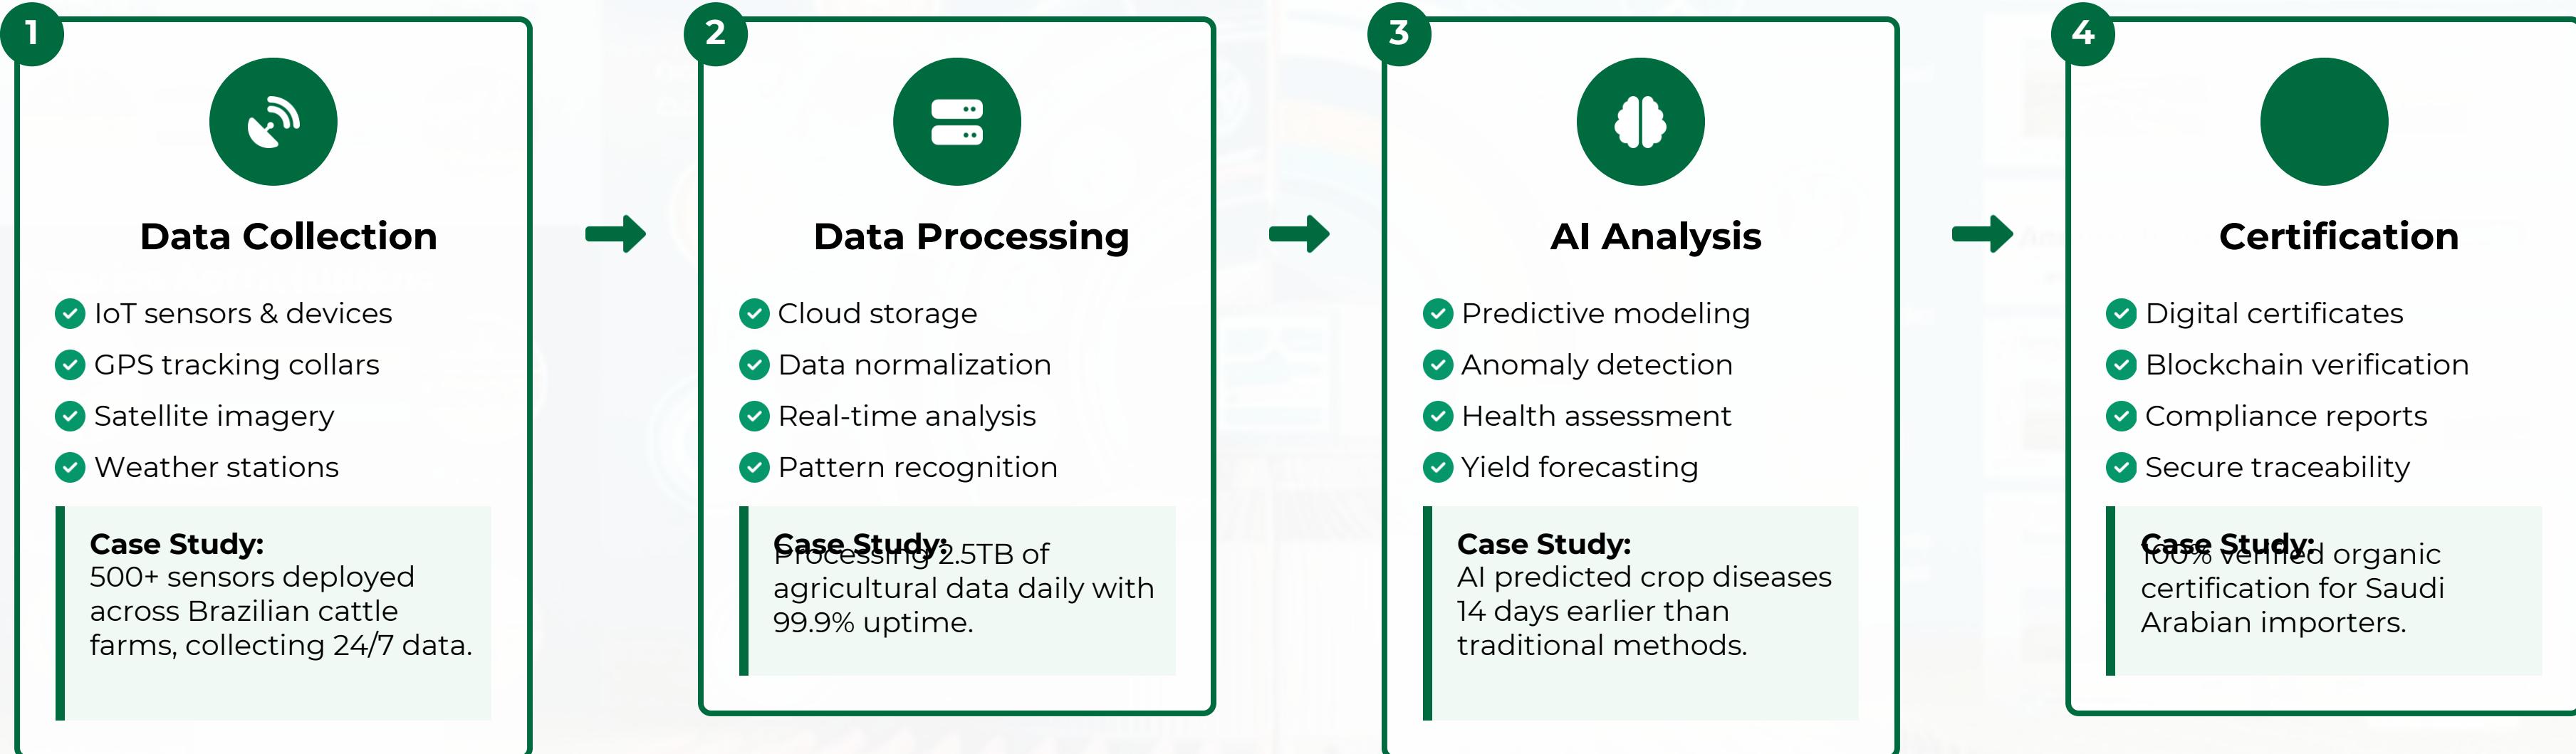

18%

Higher Yield

31%

ROI in Year 1

Technical Tracking & Monitoring Stages

Complete Tracking System Benefits

Full Traceability

Track products from farm to consumer with detailed history.

Enhanced Security

Fraud prevention and quality assurance at every stage.

Performance Insights

Actionable data for continuous improvement.

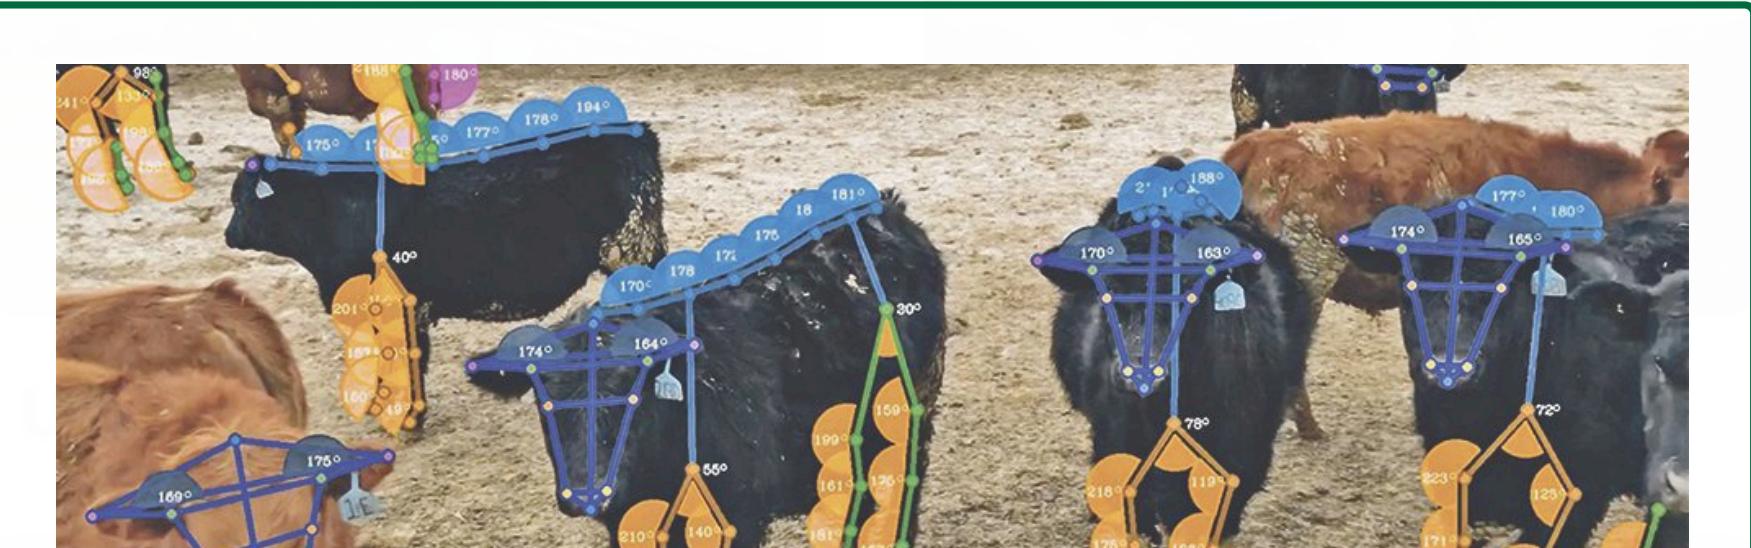

Artificial Intelligence Data Analysis

How Qualimark leverages AI and machine learning to transform agricultural data into actionable insights, enabling smarter farming decisions and improved outcomes.

Smart Crop Analytics

Advanced visualization tools monitor crop health in real-time, identify stress patterns, and predict yield potential with 92% accuracy using historical and current field data.

Livestock Health Intelligence

AI-powered monitoring systems track animal behavior patterns, detect early signs of illness, and optimize nutrition plans to improve herd health and productivity.

Predictive Modeling

Forecasts crop yields and disease outbreaks 14 days ahead

Resource Optimization

Reduces water usage by 30% while maintaining yield levels

Real-time Alerts

Immediate notifications for anomalies requiring action

Technical System Models & Practical Applications

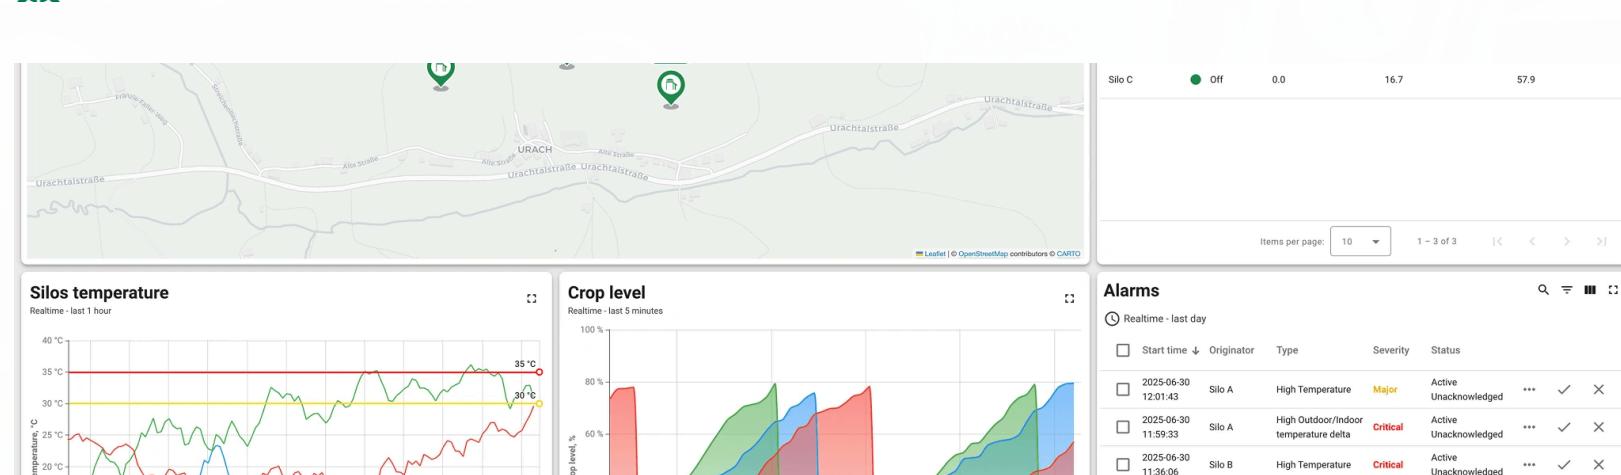

Smart Dashboards

Qualimark's intuitive dashboard system provides real-time insights on:

Weather Conditions

Pest Alerts

Value for Partners & Producers
